- ▶ Solution Lets You Answer Your Office or Home Phone From Your Mobile Phone - *Anywhere*
- ▶ Greatly Improves Mobile Phone "Talk" Coverage Inside Your Office or Home

Do you use your mobile at the office or home? And if you do, do you worry about burning too many mobile minutes each month?

Does the weak, in- building signal often make talking difficult?

Are you missing calls at work because you're often away from your desk or stuck in meetings?

Are you tired of juggling between your mobile and office phone, or your mobile and landline phone at home?

You are not alone! Everyone who owns a mobile has experienced these issues. An entire industry, voice mail, was created to address the "missed call" problem, but voice mail is impersonal and often results in phone tag which is hardly the best way to communicate with your important customers or clients.

And, in today's challenging economic climate, missing or dropping an important phone call can literally mean the difference between making or losing money.

uMobility solution solves two very important problems for mobile users:

1. Lets you answer your business or home at reduced cost
2. Greatly enhances in-building coverage to ensure reliable mobile usage anywhere in your office or home.

How it Works...

The solution automatically replaces the weak and unreliable cellular signal experienced from inside a building with the much stronger and more stable Wi-Fi signal in your office or home, ensuring solid voice

quality. You still make and receive calls from your mobile exactly as you normally would. Patented technology senses when you enter or leave your office or home and then your office or home calls are automatically directed to your mobile. Powerful, additional technology ensures that wherever you are, your mobile voice quality will rival that of your office or home landline phone.

Business Example. Tom is away from his cubicle. He may be in the conference room or even out of the office at a coffee shop. Mary, a co-worker, dials Tom's four-digit business extension: 4156. Normally, the call would roll to Tom's office voice mail, but with uMobility, Tom's mobile rings and Tom is able to talk to Mary, just like he is sitting at his desk. Better yet, if Tom is in a Wi-Fi hotspot, all calls are routed to Tom's mobile over the Wi-Fi network and absolutely no mobile minutes are used by Tom – all day, every day!

Home ExampleAs soon as Janet is in range of her home Wi-Fi network, uMobility recognizes her mobile and her home phone number now automatically rings on her mobile. She can also make calls from her mobile that ring with her home phone number Caller ID. No mobile network is bypassed, so Janet can now talk as long as she wants on her mobile at home or from any Wi-Fi hotspot!

Business Benefits

uMobility provides many benefits for you at the office:

- Lets you answer your office phone from your mobile – anywhere
- Replaces the weak, outside mobile signal with the considerably stronger and more stable Wi-Fi signal inside your office

- Ensures that you'll never miss an important call again if you step away from your desk phone
- Lets you maintain an "in the office appearance" while you are out of the office
- Lets you enjoy the convenience and freedom of movement that is provided by your mobile in your office
- Reduces mobile minute charges each time a mobile is used at the office because the cellular network is bypassed
- Lets companies track mobile usage in the office because all mobile calls are captured by the office phone system call logs.

Home Benefits

uMobility also offers several compelling benefits for home users:

- Lets you answer your home phone from your mobile - anywhere
- Replaces the weak, outside cellular signal with the considerably stronger and more stable Wi-Fi signal inside your house
- Eliminates the need to pay for or install
- Lets you stop juggling between your mobile and landline home phone
- Lets you maintain an "at home" appearance when you are away from your home
- Saves money – lets you talk on your mobile at home as long as you want without burning expensive mobile minutes!
- Integrates with social media over Internet technologies for secure unbridled communication.
