Varaha's uMobility Stimulates Broadband Value

Varaha's uMobility is Broadband Stimulus Ready

DALLAS, TX, March 30, 2009 – Varaha Systems, Inc., a leading provider of fixed-mobile convergence (FMC) solutions confirmed today that Varaha's uMobility™ solution meets all relative requirements for proposed federally funded broadband stimulus projects.

In a public safety scenario, uMobility provides network redundancy to broadband services; using dual mode smartphones, uMobility allows emergency responders and other government workers to communicate using both WiFi and cellular networks, creating an "always on" environment in the event of a network disaster. Agency contact information remains the same in business as usual or disaster recovery mode providing continuity while streamlining relief efforts. With uMobility's messaging (e.g., SMS) offload feature, Varaha's solution provides dispatch with an additional way to reach resources which allows messaging applications to work without interruption.

Citywide access becomes even more valuable for government workers as their mobile smartphone becomes their deskphone extension, raising the bar for public service. Through uMobility, all government offices are decidedly more available to each other and more importantly to their constituents. Through the use of WiFi networking for voice communications, governments can improve service levels while reducing costs to match current budget levels.

 "uMobility allows carriers and their customers to tap into the available federal and state budgets for better security in schools, cities and counties while reducing cost with improved services including implementation of disaster readiness." added Ed Cox, VP of Marketing and Carrier Sales for Varaha Systems.

About Varaha Systems
Varaha Systems is a leading provider of FMC (fixed-mobile convergence) solutions for carrier and enterprise networks.   Varaha's patented and comprehensive uMobility solution ensures superior voice quality through its Service Quality Aware (SQA) software architecture, seamless network hand-offs and network security along with a rich set of mobile capabilities.   Varaha is headquartered in Dallas, TX with sales and development centers in three continents. Learn more about Varaha Systems by visiting www.varaha.com.
